LIMITLESS LUXURY PERFORMANCE

Understated yet impossibly imposing, OBSIDIAN stands tall as the pinnacle of PC gaming.

Sleek on the outside, relentless within. Every corner is expertly engineered for unchained power, with precision water cooling keeping both CPU and GPU ice cold under pressure - sustaining higher speeds and uncompromising performance, session after session.

PERFORMANCE OVER SPECTACLE

For gamers who demand peak performance and nothing else.

Obsidian rejects the idea that power needs to be seen. It delivers relentless power that never falters.

Ice-cold water cooled components run as hard as you need, for as long as you need. When the pressure rises, Obsidian holds firm.

A BOLD REBELLION

Dark by design, Obsidian is a refined blackout system where every corner serves a single purpose: **pure power**.

No distractions. Just absolute control. Engineered for those who accept nothing less than the very best that gaming has to offer.

WATER COOLED HERITAGE

At Chillblast, we don't just build water cooled PCs - we've been perfecting them for over a decade. We've learned that performance only happens when precision, care and experience come together.

Every Chillblast water cooled PC is hand-built to order, and goes through rigorous testing to make sure it exceeds expectations.

water cooling expertise

BUILT TO HOLD ITS PERVE

Water blocks attach directly to the CPU and GPU to absorb heat and transfer it to the liquid coolant

A water pump circulates coolant through the PC, moving water away from the components and towards the radiator

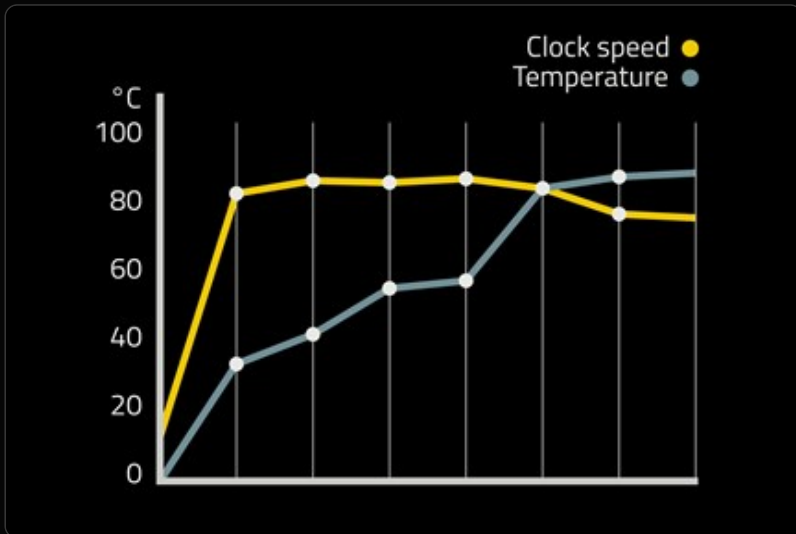

Coolant flows through the radiator, where fans push or pull air across its surface to cool it

Unrivalled performance

Better cooling means your PC can power through and achieve better frame rates and quicker render times

[+ Read more](#)

Temperature is key

Your processor and graphics card perform best at cooler temperatures - delivering better frame rates and quicker render times

[+ Read more](#)

Whisper quiet

Water is more effective at conducting heat than air, so you need fewer fans, running at slower speeds - and that means less noise.

[+ Read more](#)

Longer-lasting

Heat can push PC components to the limit, so running at lower temperatures keeps them at peak performance for longer.

[+ Read more](#)

FOR REAL LIFE

Obsidian doesn't just perform at the max setting but **clears right past it**.

It's engineered for the games of the future with the most advanced components on the market and plenty of headroom and upgrade capacity, so you can keep your PC's performance ahead of the game.

Get the ultimate gaming setup for £8,299.99 and save £280. Our precision Cryo peripherals, blisteringly smooth 32" Cryo monitor, and the pinnacle of gaming PCs, the Obsidian.

TAKE A CLOSER LOOK

CLASSIC DESIGN, BUILT FOR THE FUTURE

ORIGIN represents a throwback to our roots.

With over 20 years of gaming PC experience, we're looking back to an era before all the RGB lights and flashy colours, when it was the tech that was at the heart of gaming, without forgetting what we know now.

BEYOND THE BLACKOUT

Edge Gaming PCs

If you prefer RGB expression, our Edge gaming PCs set you up to win in style

Industry-leading 5 year warranty

We're proud of how much customers love and trust us, and that's why your PC is protected by an industry-leading 5 year warranty. So just in-case anything goes wrong, we've got you covered.

The first 3 years warranty covers parts and labour – we'll collect your system, repair it and replace any parts as necessary, and return it to you free of charge. The final 2 years covers labour costs on a return to base basis.
